

Managed Motorways

Kate Carpenter

CIHT Road Safety Panel Chairman

Julian Road, Bath

3 years before

- 1 fatal crash
- 8 serious injury crashes
- numerous slight injuries

3 years after

- 0 fatal crashes
- 0 serious injuries
- 0 slight injuries

Which is which?

Use
hard shoulder
for M40
only

Merging traffic doesn't know if LBS1 open
downstream

Platoons of traffic each side of peak

Sudden merge (or not at all)

So...is there a
better way?

ALR

- No opening/closing regime
 - Consistent 24/7
 - Less signing = less capital/revenue cost inc staff
 - Less visual intrusion
 - Deters discretionary stops
 - Potentially hazardous for workers – mitigate by process and control (less technology to maintain)
- Remember **'before'** as well as **'after'**!

Net Risk

- More slight injuries vs fewer serious?
- More pedestrian injuries vs fewer vehicle users

		Frequency of collision			
		more than one per year	one every 1-4 years	one every 5-10 years	less than one per 10 years
Severity	Fatal	Very high	High	High	Medium
	Serious	High	High	Medium	Medium
	Slight	High	Medium	Medium	Low
	Damage	Medium	Medium	Low	Low

Remember to consider **'before'** as well as **'after'**!

Consider the consequences of the staged implementation on drivers' perceptions – especially how they perceive other links.

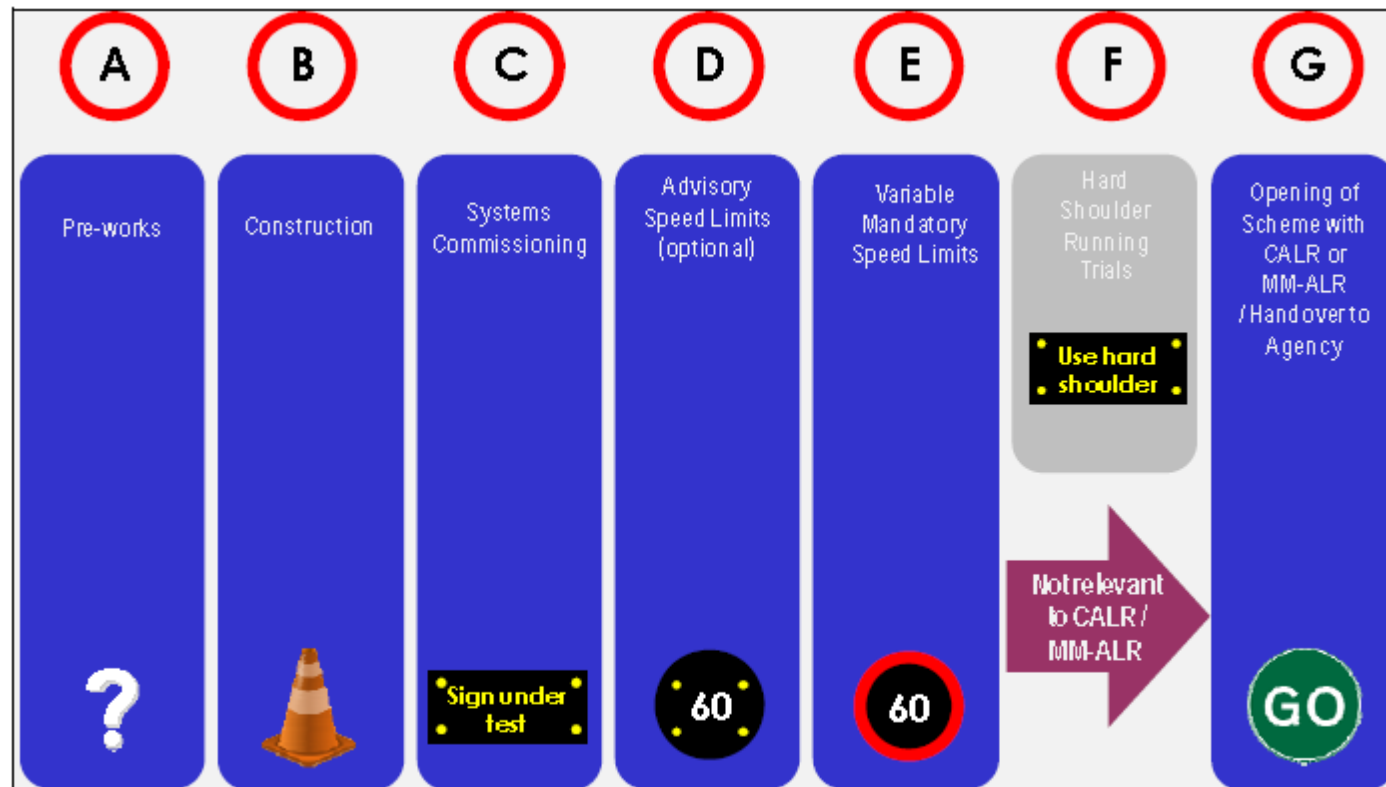

Figure 9 – Lifecycle of the CALR or MM-ALR Scheme

Possible future developments: MM3?

- Route consistency
- Safety driven
- Self-explaining

Generic Safety Report
