

Passive Safety Workshop endorsed by:

Later this year, a revised Passive Safety Standard - EN 12767:2019 will be published. Some of the changes in the revision include the way in which existing and new passive products are required to be classified, affecting how they should be specified. Electrical connections are also considered.

In particular, the changes between the old performance class recommendations specified in EN 12767:2007 and those contained within EN 12767:2019 are that rather than just three required parts to the classification, (Speed, energy absorption and occupant safety) there will now be a further four additional classes. (Backfill type, collapse mode, direction of impact and risk of roof indentation). These additions may also affect where and when some existing products should be used.

UK Roads Ltd invites designers, managers and specifiers to a **Passive Safety Workshop** to learn about the new standard, to know how to specify both existing and new products for particular situations in future. This event is endorsed by The Institute of Highway Engineers and the Chartered Institution of Highway & Transportation. A full days CPD credit is available.

This workshop is also endorsed by Highways England: *"Passively safe structures play a key role in making the road environment more forgiving. However, it is important that designers are aware of and understand the requirements of the standard to allow them to design and specify appropriate products to ensure that the positive safety benefits are achieved. Highways England welcomes initiatives to educate and inform designers and specifiers to improve safety and I am happy to support this workshop".*

Jim Gallagher BSc (Hons) CEng MICE, Principal Structures Advisor Safety, Engineering and Standards Structures Policy, Highways England.

Whether you are very familiar with passive safety design but need updating as a result of the new standard or would just like to learn the basics, you can do so by attending this event on **25th June 2019 at the National Conference Centre – Birmingham (Near M42 – J6).**

Delegate places are £125.00 + VAT (A 20% discount is available for CIHT and IHE members). Places are limited so please book early to avoid disappointment. Please contact info@ukroadsltd.com for further information and/or to book a place.

The **Passive Safety Workshop** will be integrated with an exhibition of passive products and experts from manufacturers and suppliers will be on hand to explain how their products will be able to be used. To help designers, a comprehensive listing of available products and their updated classifications (where known) will also be provided.
