

Citizens in Motion – who's driving your future

Date: Tuesday 18th June 2019

Time: 17.30 for 18.00 start (refreshments from 17.30)

Venue: Arcadis, 180 West George Street, Glasgow

Natalie Sauber leads Market Intelligence and Mobility Solutions in Arcadis and is responsible for tracking the latest trends, technologies and solutions impacting the Manufacturing and Technology sector with a strong focus on Electric Vehicles, Connected and Autonomous Vehicles (CAV) and Mobility as a Service.

Natalie will give a talk on how the emerging Connected and Autonomous Vehicles (CAV) revolution opens a new frontier of disruption in transport, infrastructure and urban living. For our cities, this presents a huge opportunity to radically transform urban mobility. While all cities share common fundamental attributes, all are ultimately different, and a 'one size fits all' approach to connected and autonomous vehicles is unlikely to deliver the full extent of the opportunity. For cities that proactively shape CAV to meet their needs and ambitions, it offers a colossal opportunity to enhance mobility and transform city transportation. For those that do not, it threatens to disrupt the status quo in a way that is inconsistent with a city's aims and the interests of its citizens and visitors. Looking at 14 cities around the world, what are the factors that may - or may not - support the development of CAV-based solutions to help each city achieve its mobility objectives?
