

ONLINE SEMINAR SIGNS AND MARKINGS – GETTING THEM RIGHT

DATE & TIME: 23 April 2024: 18:00 – 19:00 GULF STANDARD TIME

ABOUT THE EVENT

Road signs and markings are not always viewed by all as having the same required level of technical expertise needed when compared to geometric design or structures. However poor quality and misleading signs and markings can be a serious problem for road safety. Incorrect designs being rejected are also a problem in delaying project approvals and costing consultancies more than needed with multiple redesigns and approval submissions.

This webinar looks specifically at signs and markings in the UAE but is applicable region-wide. It considers best practice, identifies common mistakes and reasons for rejection by local road authorities and how to improve your signs and markings designs.

It also considers the safety aspects of signs and specifically signposts as roadside hazards and how to ensure your signs do not pose a hazard to road users including passive safety options.

ABOUT THE SPEAKER

David George is Road Safety Specialist for Al Ain City Municipality & has specialised in road safety engineering since 1996. He has led teams on thousands of road safety audits in UK, Europe and Middle East, as well as writing, developing and presenting a range of road safety training courses, speaking at various national conferences, and appearing on television on road safety issues. David is a past Vice-Chair of the Society of Road Safety Auditors, SoRSA.
